

[PRODUCT DATA SHEET]

Mtrack

The revolutionary based tracking and recovery product

The mtrack features both GSM and Radio Frequency (RF) technology to track and recover any valuable asset. By using a combination of GSM and RF signals means that your assets can be recovered where previous leading GPS systems have failed - mtrack is guaranteed to still locate your asset in the following locations:

- Inside buildings
- In a multi-storey car park
- Inside a trailer
- Inside a garage

Uses the GSM network for tracking and retrieving stolen goods

The small size of the mtrack makes it easy to conceal in whatever the customer wants to secure/track. The mtrack is wireless and easily installed by the user. The mtrack life-span is 1 to 4 years depending on configuration with no need for external power supply. The service provider will activate, monitor and if needed, adjust the mtrack over the GSM network given the specifications from the customer. The RF beacon enables the unit to be traced in all environments, both indoors and out.

The mtrack can be programmed remotely to respond to motion, tampering and a manually activated alarm. All parameters of the mtrack can be customised to meet your demands using our web software, track2find. Mtrack is totally portable, and can be moved from asset to asset. Being wire free, it can be installed in minutes and be placed anywhere on the asset. The result is that there are no complicated installation process and no wires for thieves to trace back.

- **Totally portable tracking device**
- **97% asset recovery rate**
- **Lies 'dormant' till you wish to recover your goods**
- **No giveaway wires or antennas**
- **Works where GPS systems fail**
- **Uses GSM, RF and cell-site triangulation technology**
- **Remotely configured via GSM**
- **IP67 – certified waterproof to 1 metre**
- **Up to 4-year internal battery life**
- **Easily fitted & concealed in minutes**
- **Movement & tamper alerts**
- **Reliable and proven**
- **Measures just 125mm x 70mm x 38mm**
